Crysis 2 is a game where you play as the multiplayer character A. Bios Warfare. If you are an amazing pro at the game, you can carry out a multiplayer play of single player mode. A large tower of containers has an added level, its peak is assaulted. The maximum wall of this level has 100 assault points; the walls are equally spaced out for a distance of 200 assault points. Exploding sections of wall are removed, giving a way for a link to be completed. Any section of wall which is higher than the next has an explosion bar. If your section of wall has been fully exploded, the next wall over will be cleared of sand, and the game will proceed to blow up the next wall. The number of walls blasted at a time can be managed by the player. Each wall knocked down by a push of the button starts off as a solid wall block, and will be detonated down to the floor when it reaches the bottom. Each wall cleared is marked by a golden arrow above it, and becomes visible to other players. The number of walls that have been completely cleared by a push of the button is a fun count, but the real reason to push the button is the maximum number of bombs one can carry at one time, regardless of type. I'm trying to get Crysis 2 to run but I can't ever get past the loading screen. I've tried starting the game from the CD, from my DVD drive, using the crack they provided, loading the game in safe mode, and even with administrative rights. As far as I can see the game is working fine and loading up. I've tried changing every BIOS setting that I can think of (including the extensions, the APU, the CPU, the motherboard, and then reinstalling the OS). I've also deleted my Windows 7 user profile, although I don't think that has anything to do with this. Any help would be appreciated. A: I found a solution to the problem and I thought I'd share.
