What's New In?

Malwarebytes Anti-Exploit is a security program designed to protect your PC from harmful attacks. When a system is exposed to various types of viruses and malware, it is, of course, targeted. At the same

time, however, remote hackers or even a compromised website can also carry nasty threats. Malwarebytes Anti-Exploit offers the best protection against it all. Most security applications of this kind check your PC for vulnerabilities or unsafe programs. They work with the automatic update feature and put an onus on installing any new applications you have. All that Malwarebytes Anti-Exploit does is perform a

silent scan to find any vulnerabilities on your computer. In other words, it keeps your system protected, without annoying you or your family with notifications and warnings. Another crucial component of Malwarebytes Anti-Exploit is Malwarebytes. Malwarebytes is a malware remover, which is often more efficient than a security solution alone. Malwarebytes is a self-detection tool, which means that the application continuously scans your

system for infections, just like a security application. When malware is detected, the hacker will be notified and Malwarebytes' autostart feature will launch the removal procedure in no time. Malwarebytes also offers an anti-ransomware tool, which means that Malwarebytes Anti-Exploit scans your system for weak spots and then protects them from any ransom-ware attacks. Apart from these automated tools,

Malwarebytes Anti-Exploit also offers the manual mode. In this mode, you can manually find programs to blacklist on your system. You can put such programs on the blocked list and skip a scan of them on startup. Malwarebytes Anti-Exploit has two simple menus on the top: Malwarebytes and Settings. The Malwarebytes menu, accessible from the Help menu, allows you to adjust the application's settings. Rating: 4.5/5 Visual

Appearance Malwarebytes Anti-Exploit is a straightforward Windows application, which does not add any clutter to the desktop. The application sports a light brown color scheme, which is striking and eye-catching. The application is relatively simple, which makes it easy to use. The main window, which is always on display, contains a helpful status bar at the bottom with the application's status. It shows how many applications

have been scanned, how much memory the application needs and much more. It can be pulled down from the side if desired, making the
